## Contract Scope

The key Goals and Inputs of contract 69172 were articulated in Schedule 1 of the Scope of Services.
The heads of the contract have been identified below as a reference and checklist for compliance with the assignment as described in the detail of the following report.

## Goals

1.3 To enable NESU/MEHRD to disseminate the results of the SISTA tests to stakeholders through item analysis on the Solomon Islands Standardised Test of Achievement (SISTA) at year 4 and 6.

Outputs
a. Provide NESU with advice on sampling, development of data entry templates, preparation of report templates and descriptors for student reports
b. Technical psychometric analysis of SISTA 2013 data
c. Preparation of stakeholder reports, facilitation of in-country capacity building workshops and presentation of report to MEHRD on the analysis of year 4 and year 6 Literacy and Numeracy SISTA 2013
d. NESU expects that the appropriate software if needed to be used for the data entry will be provided with and as a part of the services to be provided by the psychometrician
e. Assist to build NESU staff's capacity to conduct item analysis from SISTA data for the purposes of identifying pupil's learning difficulties in the subjects they are tested; make relevant sections of MEHRD aware of pupils' learning difficulties and recommend strategies and interventions to improve the teaching and learning processes in order to improve student's learning achievements particularly in the lower Years (1-4) of primary schooling ;provide feedback on what students can and cannot do in literacy and numeracy expected outcomes to Education Authorities, schools and individual students and parents.

## Inputs

2.4 Under the supervision of the Director of the national Examination and Standards Unit, the specialist will provide the following inputs:
a. Data entry and analysis of student test papers from Year 4 and Year 6 SISTA (Literacy and Numeracy) test sample in the application of Rasch Modelling and other psychometric techniques.
b. Facilitate training workshops in marking, entry of data and use of applicable psychometric techniques in National Assessments
c. Provide on the job training to NESU staff during the assignment where necessary
d. Advise and assist the management of data at NESU
e. Facilitate development (new) and review (existing) of item descriptors of the existing Year 4 and Year 6 Assessment instruments (Literacy and Numeracy) through consultations with NESU and Literacy and Numeracy panel members.

## INTRODUCTION

The SISTA program is a key monitoring tool of the Solomon Islands Ministry of Education and Human Resource Development and has the capacity to serve multiple functions to a wide range of educational stakeholders.

An imperative of the SISTA program is that it provides the Minister and his policy makers with valid summaries regarding the health of the system and reliable measures of how well students are achieving the intended curriculum of the Ministry. A significant improvement of this analysis of the Year 4 and Year 6 SISTA tests is the development of a single Standards Referenced Scale that enables measures of growth between Year 4 and Year 6 and estimates of improvement in achievement over time to be provided.

Although the results provide summative information of key policy makers to inform data driven interventions and strategies this element of the assessments is only a single use of the data.

The SISTA results contain a wealth of data about how well students have responded to items that are indicators of curriculum attainment, and the stakeholders who are most vitally interested in this level of information are principals, teachers, students and parents who can review the information and formulate pupil level strategies most appropriate to their particular circumstances.

For the first time these analyses of the SISTA data provide reports for participating schools, classroom teachers and students that can be used to inform the current learning levels and to develop learning strategies to improve individual student achievement.

## BACKGROUND

The implementation of the 2013 SISTA assessment is the culmination of three years' work that commenced with a review of the Year 4 SISTA tests and the data from the 2010 implementation of the assessments. This review identified a number of areas in which the instruments might be improved to provide a better estimate of student ability and more diagnostic information regarding what students have and have not achieved in the targeted Year level.

The modification of the previous SISTA instruments has been a transitional process so that a direct link between the 2013 test and results can be observed and at school level with previous assessments and there is not a major difference in the nature and structure of the tests that may be disruptive to the assessment process.

The face validity of the 2013 SISTA tests has been maintained through a number of processes including;
a. Direct item level linking of items to curriculum outcomes;
b. Review by curriculum experts to ensure items are within the scope and sequence of the target population's learning experiences;
c. A field trial of the Year 4 instruments to review the psychometric and technical features of the individual items and the tests as a whole;
d. Engagement of members of NESU, SINU and CDU in reviewing items and modifying them as appropriate to make them technically and editorially robust.

These panels have endorsed the instruments as fair and valid test of the implemented curriculum in Years 4 and 6 and that the content and relative difficulty of the items provide a reasonable reflection of the achievement of the target outcomes for each Year level test.

## EXECUTIVE SUMMARY

## Key Findings

## Key Finding 1

- The achieved sample was representative of the national demographic and provides a reliable model for the estimation of national and provincial results.

## Key Finding 2

- The test constructs align well with the Standard 4 and Standard 6 curriculum outcomes of Year 4 and Year 6. The review processes to ensure items are appropriate and in accord with the scope and sequence documents provide evidence of the face validity of the SISTA 1 and SISTA 2 test instruments.

## Key Finding 3

- The reliability statistic (Cronbach $\alpha$ ) of each test is in the good to strong range with the exception of the English Reading strand of Year 6.

## Key Finding 4

- The tests have scaled well and the embedded common items have functioned sufficiently consistently to enable comparisons between Year 4 and Year 6 performances to be estimated.
- The English Literacy scales have been developed using the sub-strands of Reading and Language which have performed unidimensionally and consistently at each Year level.
- Writing has been analysed separately as it functions quite differently to the other English sub domains
- The Writing results are relatively poor compared to those of Reading, Language and Mathematics

## Key Finding 5

- The SISTA 1 tests in English and Mathematics have been well targeted to the sample populations and have generated a good distribution of item difficulties that cater to a wide range of student abilities.
- There are some 'gaps' in the range of item difficulties in the SISTA 2 tests.

Table ES1 -Summary of percentages within Standards Levels by subject and year level

|  | Critical <br> Level <br> $\%$ | Below <br> Expected <br> level - <br> emerging <br> $\%$ | At <br> Expected <br> Level <br> $\%$ | At or <br> Above <br> expected <br> standard <br> $\%$ |
| :--- | :---: | :---: | :---: | :---: |
| English Literacy | 7.6 | 26.0 | 33.0 | 66.4 |
| Reading | 14.8 | 21.4 | 30.0 | 63.8 |
| Language | 9.4 | 25.9 | 32.3 | 64.6 |
| Writing | 39.6 | 28.1 | 12.5 | 32.3 |
| Mathematics | 9.5 | 23.8 | 39.6 | 66.7 |

| Year 6 | Critical <br> Level <br> $\%$ | Below <br> Expected <br> level - <br> emerging <br> $\%$ | At <br> Expected <br> Level <br> $\%$ | At or <br> Above <br> expected <br> standard <br> $\%$ |
| :--- | :---: | :---: | :---: | :---: |
| English Literacy | 9.3 | 28.4 | 34.5 | 62.3 |
| Reading | 10.8 | 23.8 | 24.9 | 65.4 |
| Language | 9.4 | 28.4 | 36.9 | 62.2 |
| Writing | 26.2 | 14.7 | 22.2 | 59.1 |
| Mathematics | 3.3 | 10.1 | 26.5 | 86.6 |

## Key Finding 6

- The performance of the items of each test, and of the common items designed to measure the growth between Year 4 and Year 6 have functioned adequately and enabled Literacy and Mathematics scales to be developed and Standards relative to curriculum outcomes to be described.

## Key Finding 7

- The summary results by Level are generally consistent with those produced by other assessments including previous SISTA assessments and the PILNA pilot.
- The observed improvements in overall performances may be attributed to:
a. Better tests and improved alignment of the tests with the target population; and
b. In the case of English Literacy the disaggregation of the Writing scale from the other strands of English.

Table ES2 Rasch test statistics - English estimates of mean student ability

| Year | Domain | $\mathbf{N}$ | Minimum <br> Score | Maximum <br> Score | Mean | Std. <br> Deviation | Growth |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Year 4 | English | 2843 | 168.3 | 631.7 | 399.6 | 58.3 |  |
| Year 6 | English | 2949 | 255.8 | 626.9 | 445.0 | 52.7 | 45.4 |
| Year 4 | Reading | 2843 | 208.7 | 588.2 | 401.2 | 69.6 |  |
| Year 6 | Reading | 2949 | 243.4 | 645.5 | 449.6 | 61.7 | 47.6 |
| Year 4 | Language | 2843 | 196.8 | 605.8 | 398.1 | 59.0 |  |
| Year 6 | Language | 2949 | 256.6 | 626.6 | 443.0 | 56.7 | 44.9 |
| Year 4 | Writing | 2843 | 145.0 | 650.0 | 281.7 | 95.0 |  |
| Year 6 | Writing | 2949 | 145.0 | 650.0 | 384.2 | 101.1 | 102.5 |

Table ES3 Rasch test statistics - Mathematics estimates of mean student ability

| Year | Domain | $\mathbf{N}$ | Minimum <br> Score | Maximum <br> Score | Mean | Std. <br> Deviation | Growth |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Year 4 | Mathematics | 2863 | 173.0 | 634.8 | 393.5 | 52.0 |  |
| Year 6 | Mathematics | 2858 | 241.0 | 712.8 | 485.8 | 57.8 | 92.3 |

## Key Finding 8

- The Writing results of Year 4 are very poor and although there is significant improvement between Year 4 and Year 6 the results of Year 6 are still well below the expected level.
- The Year 6 sample was functioning, on average in Writing, at a level that could be reasonably expected Year 4 students.

## Key Finding 9

- There is significant growth in performance between Year 4 and Year 6 in Mathematics

## Key Finding 10

- The difference between the mean performances of boys and girls in Literacy is marginal with girls slightly out-performing boys.
- In Writing girls significantly out-perform boys at both Year 4 and Year 6.
- In Mathematics there is no significant difference between the performance of boys and girls.

## Key Finding 11

- There are significant differences between the mean performances of the students in rural schools compared to those in urban schools especially in the Literacy strands with urban students out-performing the rural students.
- Although still significant, and in favour of the urban students, the difference is not as great in Mathematics

## Key Finding 12

- In the English literacy and Writing domains students of non government schools significantly out-perform the students of government schools.
- In Mathematics the differences between non government school students and government school students is not significant.

## Key Finding 13

- Although the overall performance of the students from the schools sampled in the Honiara province is significantly better than the means results of the other provinces at each Year leve, the growth observed between Year 4 and Year 6 is significantly less in Honiara province than in each of the other provinces.

## Key Finding 14

- As observed in the Reading strand the relative growth between Year 4 and Year 6 students is less in the Honiara province than each of the other provinces.

## Key Finding 15

- There is significant improvement in Writing in each province between the mean performances of Year 4 and the Year 6 students.

## Key Finding 16

- The improvement in the mean Mathematics performance of students between Year 4 and Year 6 is consistent across all provinces

## Key Finding 17

- Year 4 students are developing skills in English Reading but have significant challenges in the skills associated with constructing and writing responses compared to those required in recognising a correct answer in a multiple choice item format.

## Key Finding 18

- There are weaknesses in English language acquisition at Year 4 level relative to the expected outcomes articulated in the curriculum.

## Key Finding 19

- The types of weaknesses observed in Year 4 Language are also present in Year 6.

## Key Finding 20

- The item statistics indicate that by Year 6 most students tend to have control over the basic functions of addition and subtraction and its application to money when expressed in the traditional text book algorism format.
- In each of the common items that relate to basic operations there is evidence of significant improvement by Year 6 compared to Year 4 in the mean performances of students.

## Key Finding 21

- The weaknesses in Fractions observed in Year 4 are still challenges in Year 6 Mathematics. Word problems are challenging for Year 6 students.

The Appendices to this report provide detailed information about the manner in which each of the SISTA items have performed including the manner in which they have performed in each province. This information can inform province level initiatives to improve student learning outcomes.

Included within the outputs of this consultancy are individual school and individual class reports that report the manner in which student s have performed in the assessments. This level of information can inform school specific initiatives to improve student learning outcomes.

## RECOMMENDATIONS

## Curriculum

Recommendation 1

- That the development of writing skills be noted as a weakness at the national level and that strategies be developed by all contributors to students and teacher learning to improve student outcomes in the written form of English.

## Recommendation 2

- That in Year 4 ONLY the concept of Fractions and its application to Money be included in the curriculum AND that more time be devoted in the scope and sequence programs to the mastery of the sub-strands components of Money.

## Teaching and Learning

## Recommendation 3

- That the pedagogy of teaching of writing as a subject be prioritised in teacher training AND that the use of criterion referenced assessment of writing be supported in teaching programs

## Professional Development

## Recommendation 4

- That the resources of USP, SINU, MEHRD Curriculum Unit and NESU be used to prepare Reading resources with associated assessment items to provide resources to assist teachers in the teaching and assessment of student Reading skills.

## Recommendation 5

- That samples of student works from the 2013 SISTA assessment be annotated and provided to schools as samples of various standards of student writing and the use of the SISTA writing rubric as a tool to assist teaching and learning.

## Recommendation 6

- That workshops be scheduled with key school level personnel, principals and curriculum leaders, in the manner in which the school level data from the SISTA analysis can be used to inform the dplanning of school development programs and individual class level interventions.

## Analysis and Psychometrics

## Recommendation 7

- That the Year 6 SISTA English paper include another reading passage targeting the weaker ability students AND that the majority of the items assessing the comprehension of these students in this passage are of multiple choice format.

## Recommendation 8

- That, in the event that the SISTA X forms are used for future national sample assessments, the items locations detailed in Appendices 3 and 4 are used (anchored) to assess student abilities in the assessment using IRT methodologies.

## Recommendation 9

- That, in the event that the SISTA Y forms are used for future national sample assessments, the test forms be revised to match the construct of the SISTA X forms, AND common items between the SISTA $X$ and SISTA $Y$ forms are included so that the Form $Y$ results can be calibrated on the 2013 SISTA scale.

## Recommendation 10

- That a review of the Year 6 Mathematics SISTA $2 X$ paper be conducted with a view to increase the number of slightly easier items and reduce the number of more difficult items in an attempt to better target the tests to the students and therefore maximise the information regarding their overall ability.

## TARGET/SAMPLE

## Sample Frame

The sample frame for the 2013 SISTA assessments was provided by MEHRD from the central database. NESU excluded less than $5 \%$ of schools that were in accessible and ACER excluded a further $2 \%$ of schools with populations less than 5 students as these were considered inefficient numbers of cases for logistical/result benefit purposes.

## Selection

The sample frame was explicitly stratified by Province and a senate strategy of 20 schools per stratum applied. In the cases of Rennell \& Bellona Province all schools were sampled due to the small number of schools in the province, and in Temotu Province every second school was chosen following sorting by student population size (MOS). The sample was drawn using a two stage probability proportional to size methodology in which the first stage was school and the second stage students within school.

To assist in logistical resources the same selection of schools was applied to Year 6 as had been systematically selected for Year 4.

Overall the achieved samples by student of Year 4 and Year 6 were $80.7 \%$ and $89.7 \%$ respectively with 2862 Year 4 students and 2858 Year 6 students participating in the sample program. Tables 1 and 2 summarise the participation by Province, school and geo-location.

Table 1 Year 4 Achieved sample by Province, school and Geo-location

| S4 Sample by Province | Location |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Province | Urban | Semi <br> Urban | Semi <br> Rural | Rural | Total |
| Central Islands | 1 | 1 | 1 | 18 | 21 |
| Choiseul | 1 |  |  | 21 | 22 |
| Guadalcanal | 1 | 1 |  | 19 | 21 |
| Honiara | 18 |  |  | 2 | 20 |
| Isabel | 1 |  |  | 16 | 17 |
| Makira \& Ulawa |  |  |  | 23 | 23 |
| Malaita | 1 | 1 |  | 19 | 21 |
| Rennell \& Bellona | 1 |  |  | 6 | 7 |

| Western | 1 |  |  | 24 | 25 |
| Grand Total | 26 | 3 | 1 | 164 | 194 |

Table 2 Year 6 Achieved sample by Province, school and Geo-location

| S6 Achieved <br> Sample by School | Location |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Province | Urban | Semi <br> Urban | Semi <br> Rural | Rural | Grand <br> Total |
| Central Islands | 1 | 1 | 1 | 17 | 20 |
| Choiseul | 1 |  |  | 20 | 21 |
| Guadalcanal | 2 | 1 |  | 19 | 22 |
| Honiara | 18 |  |  | 2 | 20 |
| Isabel | 1 |  |  | 19 | 20 |
| Makira \& Ulawa |  |  |  | 20 | 20 |
| Malaita | 1 | 1 | 1 | 19 | 22 |
| Rennell \& Bellona | 1 |  |  | 5 | 6 |
| Temotu | 1 |  |  | 13 | 14 |
| Western | 1 |  |  | 27 | 28 |
| Grand Total | 27 | $\mathbf{3}$ | $\mathbf{2}$ | 161 | 193 |

## Key Finding 1

The achieved sample was representative of the national demographic and provides a reliable model for the estimation of national and provincial results.

## ADMINISTRATION/MARKING/DATA ENTRY

## School Administration

Test materials were delivered on time and the assessment delivered in schools on schedule. There were no reports of abnormalities in the implementation of the assessments that participated in the program.

It is notable in the information of Appendix 1 and Appendix 2 that there was some variation in the achieved sample compared to the intended sample. This may be a function of the currency of the enrolment data. One aspect of the program that is not controlled is the school level participation of students. The variation in participation may reflect some school based selection of students that may bias the results if there are cases in which principals have 'selected' only more able students to participate in the assessments.

## Marking and data entry

Marking was performed under the direction of NESU with all items being hand marked and the student responses being annotated with scored of zero or one ( $0 / 1$ ) to facilitate the entry by the data operators. Unfortunately the score ' 9 ' which had been reserved for 'non responses' to record the items that students were unable to attempt was not implemented in the first instance. This was resolved in subsequent data entry so that estimates of "non attempts" could be produced at item level.

Writing was marked by a team of specialised markers in the application of the rubric that had been developed and refined during the field trial conducted in March 2013.

## TEST STRUCTURE

## English - Reading, Language and Writing

The English tests at both Year 4 and Year 6 were grounded in the English syllabus documents with items matched to curriculum outcomes as appropriate to each Year level and taking account of the scope and sequence of the teaching program relative to the timing of the SISITA assessments in October 2013. Table 3 details the test constructs of the English papers for Year 4 and Year 6.

Table 3 - Test Constructs - English

| Domain | Item types | Year 4 |  | Year 6 |  |
| :--- | :--- | :---: | :---: | :---: | :---: |
|  |  | Items | Points | Items | Points |
| Reading | Multiple Choice | 10 | 13 | 8 | 8 |
|  | Constructed response | 4 | 6 | 6 | 10 |
|  | READING SCALE |  | 19 |  | 18 |
| Language | Multiple Choice | 12 | 12 | 6 | 6 |
|  | Constructed response | 3 | 10 | 9 | 14 |
|  | LANGUAGE SCALE |  | 22 |  | 20 |
| TOTAL pts | LITERACY SCALE |  | 41 |  | 38 |
| Writing | Constructed response | 8 criteria | 30 | 8 criteria | 30 |

## Mathematics

The Mathematics tests at both Year 4 and Year 6 were matched exactly to the Mathematics syllabus documents with items matched to specific outcomes and the overall test divided into sub-strands that match the syllabus definitions and sub-strand order.

The scope and sequence of the intended curriculum as defined in the syllabus was considered in the determination of which items were appropriate to be assessed in the SISTA assessments delivered in October 2013. Table 4 provides detail of the Mathematics test constructs by Year level.

Table 4 - Test Constructs - Mathematics

| Strand | Year 4 |  | Year 6 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Sub Strand | Items | Sub Strand | Items |
| Number | Number | 7 | Number | 13 |
|  | Addition | 6 | 6 |  |
|  | Subtraction | 6 |  |  |
|  | Multiplication | 4 |  |  |
|  | Division | 5 |  |  |

## Key Finding 2

The test constructs align well with the Standard 4 and Standard 6 curriculum outcomes of Year 4 and Year 6. The review processes to ensure items are appropriate and in accord with the scope and sequence documents provide evidence of the face validity of the SISTA 1 and SISTA 2 test instruments.

## TRADITIONAL STATISTICS

The analyses showed that the English tests at both Year 4 and Year 6 were relatively well targeted to each of the Year 4 and Year 6 student populations. The English tests were separately analysed as and English Literacy test and a Writing assessment as research in other large scale monitoring programs (e.g. NAPLAN) shows that these domains function quite differently at both individual student and
cohort levels. The English Literacy domain was then disaggregated to analyse Reading and language independently to investigate similarities and/or differences in performance in each and any interrelationships that exist between the two sub-domains.

Table 5 provides a summary of the traditional raw score statistic of the English tests and disaggregates the overall English Literacy tests into the sub-strands of Reading, Language and Writing.

The reliability coefficients (Cronbach's $\alpha$ ) in the English tests are in the good to strong range with the exception of the Year 6 Reading sub-strand.

Table 5 - Traditional test Statistics - English

| Year | Domain | $\mathbf{N}$ | Reliability <br> (Cronbach) <br> $\boldsymbol{\alpha}$ | Minimum <br> Score | Maximum <br> Score | Mean | Std. <br> Deviation |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Year 4 | English | 2843 | 0.89 | 0 | 40 | $19.8 / 41$ | 8.1 |
| Year 6 | English | 2949 | 0.86 | 1 | 36 | $17.3 / 38$ | 6.7 |
| Year 4 | Reading | 2843 | 0.84 | 0 | 18 | $9.4 / 19$ | 4.3 |
| Year 6 | Reading | 2949 | 0.73 | 0 | 17 | $7.0 / 18$ | 3.1 |
| Year 4 | Language | 2843 | 0.80 | 0 | 24 | $10.4 / 22$ | 4.5 |
| Year 6 | Language | 2949 | 0.80 | 0 | 20 | $10.2 / 20$ | 4.3 |
| Year 4 | Writing | 2843 | 0.96 | 0 | 30 | $7.3 / 30$ | 5.7 |
| Year 6 | Writing | 2949 | 0.96 | 0 | 30 | $13.7 / 30$ | 6.5 |

Table 6 provides the traditional statistics for Mathematics for each of the Year 4 and Year 6 tests. Both tests display strong reliability statistics (>.90) and show that there is a wide range of scores achieved by students in each Year level.

Table 6 - Traditional test Statistics - Mathematics

| Year | Domain | $\mathbf{N}$ | Reliability <br> (Cronbach) <br> $\boldsymbol{\alpha}$ | Minimum <br> Score | Maximum <br> Score | Mean | Std. <br> Deviation |
| :---: | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Year 4 | Mathematics | 2863 | 0.92 | 1 | 67 | $32.7 / 68$ | 11.8 |
| Year 6 | Mathematics | 2858 | 0.93 | 1 | 69 | $37.6 / 70$ | 13.0 |

## Key Finding 3

The reliability statistic (Cronbach $\alpha$ ) of each test is in the good to strong range with the exception of the English Reading strand of Year 6.

## ITEM RESPONSE THEORY (RASCH) ANALYSIS AND SCALE DEVELOPMENT

## Scale Development

A major aim of the implementation and analysis of the SISTA program in 2013 was to develop a measurement scale against which student performances could be compared over time, and reliable comparisons of growth between and across years to be able to be made.

A fundamental requirement of measurement is that there is an independent tool that does not change over time. For length we have a metre rule, for temperature we have thermometers calibrated in degrees Centigrade and for volume we have litres. These are defined and do not change irrespective of (in the case on length) whether we are measuring a piece of cloth or the height of a person.

In education it is more challenging to create a measurement tool because we cannot observe ability or intelligence (same as we cannot see temperature) but we can find indicators of skills and ability by the manner in which student respond to questions and tests.

In 2013 the responses from all participating students in the SISTA tests have been used to provide the baseline data and create the SISTA measurement scales for each domain.

These scales have been developed using methodologies that are used in a large number of countries and internationally acknowledged programs like PISA, TIMSS, PIRLS and NAPLAN. Three scales have been produces: one for English Literacy (Reading and Language), one for Writing and one for Mathematics. He Literacy scale has been disaggregated into Reading and language.

Each scale extends over both Year 4 and Year 6 - there is only one measurement scale for each subject and students are compared to that scale for the subject independent of which Year level they are currently completing. This method acknowledges that in any class there is often a wide range of ability with some students struggling well below the expected Year level, many operating in the expected ranges and some students functioning well above the current Year level expectations. Research indicates that in lower secondary schools it is not uncommon for a class to have students covering five years of student ability.

The methodologies used in the analysis and scale development include the application of Item Response Theory using Rasch (1960) measurement techniques and the implementation of common items (Equating) in Year4 and Year 6 tests to estimate the amount of growth shown by the improved performance of Year 6 in the items.

All tests were analysed using the Item Response Theory (IRT) software Conquest.

In order to give meaning to the scales the Rasch indices have been converted to scaled scores.

The linear equation used to construct the numerical scaled scores is:

## Scaled Score $=$ Rasch Logit value*50 + 400

The application of this equation results in the items of Year 4 having a mean location of 400 scaled score points and a standard deviation of 50 scaled score points.

Given the well targeted tests in Literacy and Numeracy at Year 4 the results for the measurement of the students' abilities on the same scale is provided in Tables 7 and Table 8 below.

The application of the common item methodology (items that are present in both Year 4 and Year 6 tests to measure the amount of growth observed in the data (see appendix )) have enabled estimates of mean the performance of Year 6 on the common scale to be prepared. These are presented in Table 7 and table 8.

Table 7 - Rasch test statistics - English estimates of mean student ability

| Year | Domain | $\mathbf{N}$ | Minimum <br> Score | Maximum <br> Score | Mean | Std. <br> Deviation | Growth |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Year 4 | English | 2843 | 168.3 | 631.7 | 399.6 | 58.3 |  |
| Year 6 | English | 2949 | 255.8 | 626.9 | 445.0 | 52.7 | 45.4 |
| Year 4 | Reading | 2843 | 208.7 | 588.2 | 401.2 | 69.6 |  |
| Year 6 | Reading | 2949 | 243.4 | 645.5 | 449.6 | 61.7 | 47.6 |
| Year 4 | Language | 2843 | 196.8 | 605.8 | 398.1 | 59.0 |  |
| Year 6 | Language | 2949 | 256.6 | 626.6 | 443.0 | 56.7 | 44.9 |
| Year 4 | Writing | 2843 | 145.0 | 650.0 | 281.7 | 95.0 |  |
| Year 6 | Writing | 2949 | 145.0 | 650.0 | 384.2 | 101.1 | 102.5 |

Table 8 - Rasch test statistics - Mathematics estimates of mean student ability

| Year | Domain | N | Minimum <br> Score | Maximum <br> Score | Mean | Std. <br> Deviation | Growth |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Year 4 | Mathematics | 2863 | 173.0 | 634.8 | 393.5 | 52.0 |  |
| Year 6 | Mathematics | 2858 | 241.0 | 712.8 | 485.8 | 57.8 | 92.3 |

Given that the standard deviation is defined as 50 scaled score points the growth observed between Year 4 and Year 6 in the Literacy strands is relatively consistent at about one standard deviation. Experience in other programs of this type (Australian state based programs and NAPLAN) would suggest this is about the expected range of growth observed between two adjacent target cohorts (eg Grade 3 to Grade 6 OR Grade 4 to Grade 6).

The growth observed in Mathematics and Writing is about twice the expected range being around 92 scaled and 102 score points respectively.

This would suggest that in Mathematics there is significant improvement in the base skills being taught in Year 4 Mathematics and this is a positive indicator in regards to student understanding of core Mathematics skills upon which to build higher level understandings.

The more than expected increase in the mean scores in Writing between Year 4 and Year 6 may simply reflect the very low base in Year 4 mean results.

It is observed in Table 6 that the mean of Year 4 students (281.7) is both well below the expected result of about 400 as shown in the other Literacy strands. Although there is evidence of significant improvement in Writing between Year 4 and Year 6, the mean scaled score of the Year 6 sample is 384.2 which is around the expected value of a Year 4 student cohort. In considering the observed growth it should be considered in the light to the general under-achievement in this strand of English learning.

## Key Finding 4

The tests have scaled well and the embedded common items have functioned sufficiently consistently to enable comparisons between Year 4 and Year 6 performances to be estimated.

The English Literacy scales have been developed using the sub-strands of Reading and Language which have performed unidimensionally and consistently at each Year level.

Writing has been analysed separately as it functions quite differently to the other English sub domains

The Writing results are relatively poor compared to those of Reading, Language and Mathematics

## Key Finding 5

The SISTA 1 tests in English and Mathematics have been well targeted to the sample populations and have generated a good distribution of item difficulties that cater to a wide range of student abilities.

There are some 'gaps' in the range of item difficulties in the SISTA 2 tests.

## Key Finding 6

The performance of the items of each test, and of the common items designed to measure the growth between Year 4 and Year 6 have functioned adequately and enabled Literacy and Mathematics scales to be developed and Standards relative to curriculum outcomes to be described,

## English Tests - Rasch Analyses

Appendices 3 and 4 provide summaries of the Rasch statistics provided by these analyses.

Figures 1 and 2 are the item-person maps that show the relative targeting of the items relative to the sample populations for each year level.

Figure 1 shows a good distribution of items across the full range of difficulties and a relatively normal distribution of student abilities. There is good alignment between the items assessing Year 4 literacy skills with the range of abilities demonstrated by the sample.

Figure 1 English Year 4 - item person map

Each 'X' represents 4.1 cases

Figure 2 English Year 6 - item person map

Figure 2 shows the item-person map for Year 6 English. Although the distribution of items has a reasonable range it is a little biased to the more difficult end of the range and consequently the test overall is a little too hard for the target population. This can be seen graphically by the relative position of the distribution of student abilities which can be seen to marginally below the expected scale mean of zero (0).

The distribution of items also displays a gap around the -2 area which suggests that there are few items catering to the proportion of students who are relatively weak and this test does not allow good discrimination or information to be gleaned about these students.

## Mathematics Tests - Rasch analyses

Figure 3 shows the distribution of item difficulties and the distribution of student abilities for Year 4 mathematics on a Year 4 scale. Generally the test is well targeted to the sample population with a wide range of item difficulties covering the full range of student abilities.

There is a small gap in items in the lower end of the scale, however the student distribution is relatively normal and centred very close to zero, as was the intention of the test construct developed with the NESU panels.

Figure 3 Mathematics Year 4 - item person map

Each 'X' represents 4.4 cases

Figure 4 Mathematics Year 6 - item person map

Each ' $X$ ' represents 4.6 cases

Figure 4 shows the item and person ability distributions for Year 6 Mathematics.
The distribution of items covers a wide range of difficulties although there is a dearth of items around the 2 to 3 logit range of difficulty.

The distribution of student abilities is relatively normal and displays the typical 'long tail' of students that have not mastered the basics of Years 3 to Year 5 curriculum and are falling behind in Year 6 Mathematics.

Overall although the mean of the abilities distribution is marginally above zero, the test is relatively well targeted to the sample population of the SISTA 2 tests.

## STANDARDS REFERENCED FRAMEWORK

## Literacy

For the purpose of this report Literacy has been defined as the combination of Reading and Language.

Research in multiple programs, including NAPLAN, has shown that there are significant differences in the performance of students in Reading and Language compared to Writing. Hence in these programs Writing has been analysed and reported as a separate scale to Literacy - the aggregation of Reading and Language.

The tables below provide information regarding the performance of each Year on each domain.
As discussed earlier, one of the main outcomes of the 2013 SISTA program was to develop a single measurement scale (like a metre rule) against which to compare student performance and progress. This scale (like the metre rule) is a single tool used over time to measure all students against.

At Year 4 the Expected Level of achievement is defined as Level 3.
Students at Level 2 are emerging, or developing, toward the expected level, Students at Level 1 or Level 0 are at the critical level. At Year 4 Students at Level 4 demonstrate mastery of the Year 4 outcomes and those at Level 5 indicate that they are performing above the expect level for Year 4.

At Year 6 we expect to see educational improvement in student performance compared to Year 4

At Year 6 the Expected Level of achievement is defined as Level 4 on the SISTA scale.
At Year 6 students at Level 3 are emerging, or developing, toward the expected level of Year 6 (because Level 3 is the expected achievement of Year 4 students on the common scale), whilst students at Level 2, or 1 or Level 0 are at the critical level. At Year 6 Students at Level 5 demonstrate mastery of the Year 6 outcomes and those at Level 6 indicate that they are performing above the expect level for Year 6.

Figure 5 below provides information about the 7 levels identified for Year 4 ( LO to L6) and shows that range of scaled scores achieved by students that have been included in a particular Level. The table also provides a description of the skills that are typically demonstrated by students at each level and an estimate of the percentage of students who are performing an each level. The area heavily shaded, bolded region of the table, is the Expected Level of achievement for the Year level, whilst the lighter shading identifies the students who are developing toward the expected level.

In English Literacy Figure 5 shows that 7.6\% of the sample population are at the critical levels of 0 or 1, 26\% are at level 2 with skills developing toward the expected level for Year 4, 33\% are at the expected level of Year 3 and $66.4 \%$ of student are either AT or ABOVE the expected level of achievement expected for Year 4 students.

Figure 6 is displayed in the same format as Figure 5. It shows that $9.3 \%$ of students are performing in the critical regions (L0, L1 or L2) for Year 6 students in English literacy. Because we have a single common scale, Year 6 students who are displaying L2 skills are performing below the expected level for Year 4 which is an unacceptable outcome for a Year 6 student..

Figure 6 shows that $28.4 \%$ of Year 6 students are developing toward the Year 6 expected standard and that $34.5 \%$ of students are AT the expected level, with $62.3 \%$ of students AT or ABOVE the expected level for Year 6 in English Literacy.

The table below summarises the proportions of students in various the levels of achievement described below

Table 9 - Summary of percentages within Standards Levels by subject and year level

|  | Critical <br> Level <br> $\%$ | Below <br> Expected <br> level - <br> emerging <br> $\%$ | At <br> Expected <br> Level <br> $\%$ | At or <br> Above <br> expected <br> standard <br> $\%$ |  |

| Reading | 10.8 | 23.8 | 24.9 | 65.4 |  |
| Language | 9.4 | 28.4 | 36.9 | 62.2 |  |
| Writing | 26.2 | 14.7 | 22.2 | 59.1 |  |
|  |  |  |  |  |  |
| Mathematics | 3.3 | 10.1 | 26.5 | 86.6 |  |
|  |  |  |  |  |  |

## Key Finding 7

The summary results by Level are generally consistent with those produced by other assessments including previous SISTA assessments and the PILNA pilot.

The improvements in overall performances can be attributed to:

1. Better tests and improved alignment of the tests with the target population; and
2. In the case of English Literacy the disaggregation of the Writing scale from the other strands of English.

Figure 5 SISTA 1 Literacy 2013 Year 4

| Level | Score |  |  |  | Percent Cumulative |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | $\begin{gathered} 574 \\ \text { TO } \\ 525 \end{gathered}$ | 65 | 2.3 | Students at this level are able to interpret information in texts and construct a written response to indicate their comprehension of meaning. They demonstrate developing skills in inferring meaning in texts and being able to construct a written response. | $100.0$ |
| 5 | $\begin{gathered} 524 \\ \text { TO } \\ 475 \end{gathered}$ | 259 | 9.1 | Students at this level are able to interpret information in texts and construct a written response to indicate their comprehension of meaning. They display mastery of cloze passages and control over comparative forms of words with irregular forms (good, better, best). | 97.7 |
| 4 | 474 <br> TO <br> 425 | 626 | 22.0 | Students at this level are able to find multiple pieces of information in a text and construct a simple written response. They are able to identify synonyms of less common words. Typically they have developing skills in completing cloze passages and the identification of the correct structure of simple sentences. They have the capacity to construct a simple sentence using a small number of defined words. | 88.6 |
| 3 | 424 <br> TO <br> 375 | 938 | 33.0 | Students in this level are able to retrieve information from texts and construct a simple one or two word response and order the events described in a text. They are able to identify synonyms for common words and interpret simple information from texts. They demonstrate control over tense in sentences, the correct use of articles and pronouns. They have some control over comparative forms of words (tall, taller, tallest) and have emerging skills in the selection of the correct words in a cloze passage. | 66.6 |
| 2 | 374 <br> TO <br> 325 | 739 | 26.0 | Students in this level are able to retrieve literal information from texts and interpret simple relationships between characters in the text. They level can identify the spelling of some more complex, uncommon words and show developing mastery of the punctuation of sentences. They have also indicated developing control of appropriate pronouns. | 33.6 |
| 1 | $\begin{gathered} 324 \\ \text { TO } \\ 275 \end{gathered}$ | 178 | 6.3 | Students at this level are able to find literal information in a text by word matching. They have not yet mastered any skills in interpreting information in texts. They can identify a common personal pronoun and identify the correct spelling of common words. | 7.6 |
| 0 | Up to 274 | 38 | 1.3 | Insufficient information to define skills achieved. | 1.3 |
| Total |  | 2843 | 100.0 |  |  |

| $\mathbf{6}$ | TO | 574 |  |  | 18.2 |

At Year 6 in Mathematics, $86.6 \%$ of students are functioning AT or ABOVE the expected standard of a Year 6 student.

## SUMMARY PERFORMANCE and MEASURES of GROWTH

Tables 10 and 11 show the relative performance of Boys and Girls in the overall English scale and each of the subscales of Reading and Language.

At Year 4 the girls marginally out-perform the boys in each scale but by Year 6 the gap between them has decreased. Because of the size of the samples the differences are statistically significant. However when we consider the relative size of the differences at Year 3 it is about .3 of a standard deviation which is a significant effect size, but by Year 6 the difference is only about .1 of a standard deviation which is less significant.

Table 10 - Year 4 Literacy Descriptive Statistics by Gender

| Gender | Strand | N | Minimum | Maximum | Mean | Std <br> Error | Std. <br> Deviation |
| :---: | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Boys | Scaled Score English | 1447 | 168 | 590 | 391.9 | 1.5 | 57.0 |
|  | Scaled Score Reading | 1447 | 209 | 588 | 392.6 | 1.8 | 69.6 |
|  | Scaled Score Language | 1447 | 197 | 606 | 391.6 | 1.5 | 57.5 |
| Girls | Scaled Score English | 1394 | 238 | 632 | 407.6 | 1.6 | 58.6 |
|  | Scaled Score Reading | 1394 | 209 | 588 | 410.2 | 1.8 | 68.5 |
|  | Scaled Score Language | 1393 | 197 | 606 | 405.0 | 1.6 | 59.7 |

Table 11 - Year 6 Literacy Statistics by Gender

| Gender | Strand | N | Minimum | Maximum | Mean | Std <br> Error | Std. <br> Deviation |
| :---: | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Scaled Score English | 1448 | 256 | 627 | 441.3 | 1.4 | 52.2 |
|  | Scaled Score Reading | 1448 | 243 | 646 | 446.5 | 1.6 | 62.2 |
|  | Scaled Score Language | 1448 | 257 | 627 | 438.8 | 1.5 | 55.8 |
| Girls | Scaled Score English | 1499 | 256 | 627 | 448.6 | 1.4 | 52.9 |
|  | Scaled Score Reading | 1499 | 243 | 646 | 452.6 | 1.6 | 61.1 |
|  | Scaled Score Language | 1499 | 257 | 627 | 447.2 | 1.5 | 57.3 |

Table 12 shows the comparisons of performances by the sample in Writing by each Year level and by gender.

The table shows that Girls significantly out-perform Boys at both Year levels and that there is a large improvement in performance between the Year 6 cohort and the Year 4 students.

Table 12 - Year 4 and Year 6 Writing Statistics by Gender

| Year | Gender | Writing | $\mathbf{N}$ | Minimum | Maximum | Mean | Std. <br> Deviation |
| :---: | :---: | :--- | :---: | :---: | :---: | :---: | :---: |
| Year 4 | Boys | Writing Scaled Score | 1447 | 145 | 607 | 264.8 | 91.0 |
|  | Girls | Writing Scaled Score | 1394 | 145 | 650 | 299.1 | 95.9 |
| Year 6 | Boys | Writing Scaled Score | 1448 | 145 | 650 | 370.4 | 100.1 |
|  | Girls | Writing Scaled Score | 1499 | 145 | 650 | 397.7 | 100.3 |

Table 13 below provides a summary of the Mathematics results by Year level and gender.

The table shows that there is no significant difference between Boys and Girls at either Year level although the mean score of the Boys is marginally higher than that of the Girls at Year 6. The growth between the Year 4 performance and the Year 6 performance of each Year is shown in the difference column ( $\Delta$ ). It shows relatively consistent increases between the genders.

Table 13 - Year 4 and Year 6 Mathematics Statistics by Gender

| Mathematics |  | Year 4 |  |  | Year 6 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Gender | Mathematics | $\mathbf{N}$ | Mean | Std. <br> Deviation | $\mathbf{N}$ | Mean | Std. <br> Deviation | $\boldsymbol{\Delta}$ |
| Boys | Scaled Score | 1458 | 393.1 | 51.3 | 1412 | 488.8 | 56.2 | 51.6 |
| Girls | Scaled Score | 1405 | 393.9 | 52.8 | 1445 | 482.9 | 59.2 | 45.6 |

## Key Finding 10

The difference between the mean performances of Boys and Girls in Literacy is marginal with girls slightly out-performing boys.

In Writing Girls significantly out-perform boys at both Year 4 and Year 6.
In Mathematics there is no significant difference between the performance of Boys and Girls

The tables 14 through 16 show the relative performances of the samples by location.
The sample was disaggregated into four main groups, Rural, Semi-Rural, Semi-Urban and Urban. Unfortunately the achieved response sample for the Semi-Rural and Semi-Urban are very small and these results should be considered with caution.

Table 14 shows that Urban students significantly out-perform the Rural students by almost a full standard deviation (50 scaled score points) at each Year level in each of the overall English literacy scales and each sub-scale. It is notable that in each of the non-Urban groups students tend to perform better in Reading than in Language. This is not the case in the urban sample.

Table 14- Year 4 and Year 6 English Statistics by Location

Writing has been score using a rubric that concentrates on the components of writing using rating of student development in eight criteria; Relevance, Narrative Features, text Organisation, Cohesion, Vocabulary, Grammar, Punctuation and Spelling.

As noted earlier in the report the overall mean performance in Writing is relatively poor relative to the performances of students in Reading, Language and Mathematics. Table 12 shows the relative results of the sample by location.

It is very notable that the mean result of the urban students is significantly better than each of the other groups and in particular the rural cohort. At Year 4 the difference between Urban and Rural is 68 scaled score points and at Year 6 the difference is almost 100 scaled score points.

Table 15 - Year 4 and Year 6 Writing Statistics by Location

| Writing summary |  | Year 4 |  |  |  | Year 6 |  |  |  |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Location | Domain | N | Mean | Std. <br> Deviation | N | Mean | Std. <br> Deviation | $\boldsymbol{\Delta}$ |  |
| Rural | Writing Scaled Score | 2353 | 272.0 | 94.1 | 2248 | 365.5 | 90.4 | 93.5 |  |
| Semi-Rural | Writing Scaled Score | 16 | 232.7 | 30.0 | 32 | 372.1 | 144.6 | 139.4 |  |
| Semi-Urban | Writing Scaled Score | 92 | 294.8 | 62.0 | 92 | 336.0 | 55.3 | 41.3 |  |
| Urban | Writing Scaled Score | 382 | 340.1 | 87.0 | 577 | 465.2 | 102.5 | 125.1 |  |

Table 13 shows the Mathematics result by location. As observed in the previous subjects the Urban students consistently out-perform the other groups but not by such a large amount.

Table 16 - Year 4 and Year 6 Mathematics Statistics by Location

| Mathematics summary |  | Year 4 |  |  | Year 6 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Location | Domain | N | Mean | Std. |  |  | Deviation | $\Delta$ |
| Rural | Mathematics | 2264 | 389.1 | 52.0 | 2233 | 481.5 | 56.9 | 92.3 |
| Semi-Rural | Mathematics | 16 | 389.5 | 46.2 | 31 | 458.1 | 63.4 | 68.6 |
| Semi-Urban | Mathematics | 92 | 403.5 | 40.3 | 93 | 494.0 | 59.8 | 90.4 |
| Urban | Mathematics | 490 | 411.7 | 50.3 | 501 | 505.2 | 56.4 | 93.5 |

## Key Finding 11

There are significant differences between the mean performances of the students in rural schools compared to those in urban schools especially in the Literacy strands with urban students out-performing the rural students.

Although still significant, and in favour of the urban students, the difference is not as great in Mathematics

Tables 17 through 19 provide summaries of the performance of students by governing authority. The term 'Government' is used to relate to the provincially administered schools and "Non-Govt" refer to the schools administered by church authorities or other bodies.

Some care should be taken in the interpretation of these data due to the differences in the sample sizes.

In Reading it is noticeable that the students of non-government schools have significantly outperformed the student in the government schools at Year 4. However the improvement in the mean result between Year 4 and Year 6 is better in government school students than those in the nongovernment schools and consequently the difference in mean performance is not as great in Year 6.

Table 17- Year 4 and Year 6 English Statistics by Authority

| English Literacy summary | Year 4 |  |  |  | Year 6 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | Reading | 2002 | 392.1 | 65.0 | 2284 | 447.1 | 61.1 | 55.0 |
|  | Language | 2002 | 390.2 | 54.2 | 2284 | 438.6 | 53.9 | 48.4 |
| Non Govt | Reading | 665 | 423.3 | 75.0 | 665 | 458.2 | 62.9 | 34.9 |
|  | Language | 665 | 417.1 | 65.1 | 665 | 458.3 | 63.1 | 41.2 |

Table 18- Year 4 and Year 6 Writing Statistics by Authority

| English Literacy summary | Year 4 |  |  |  | Year 6 |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Authority | Domain | N | Mean | Std. <br> Deviation | $\mathbf{N}$ | Mean | Std. <br> Deviation | $\boldsymbol{\Delta}$ |
| Government | Writing | 2239 | 276.9 | 90.7 | 2284 | 379.7 | 97.6 | 102.8 |
| Non Govt | Writing | 604 | 299.4 | 107.7 | 665 | 399.5 | 111.1 | 100.1 |

Table 19- Year 4 and Year 6 Mathematics Statistics by Authority

| English Literacy summary |  | Year 4 |  |  |  | Year 6 |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Authority | Domain | $\mathbf{N}$ | Mean | Std. <br> Deviation | $\mathbf{N}$ | Mean | Std. <br> Deviation | $\boldsymbol{\Delta}$ |  |  |
| Government | Mathematics | 1951 | 391.8 | 51.1 | 2209 | 485.2 | 56.7 | 93.4 |  |  |
| Non Govt | Mathematics | 912 | 396.9 | 53.7 | 649 | 488.0 | 61.4 | 91.1 |  |  |

## Key Finding 12

In the English literacy and Writing domains students of non government schools significantly out-perform the students of government schools.

In Mathematics the difference in mean performance between non government school students and government school students is not significant.

Table 20-Year 4 Summary mean scaled scored by subject and province

| Mean Scaled <br> Score | Literacy and Writing |  |  |  |  | Mathematics |  |

## COMPARISONS OF RESULTS BY GENDER, AUTHORITY, AND PROVINCE

In the following section the results of each subject have been presented in a "Box and Whisker" graphical format to show the relative distributions of the performances as well as the summative mean results.

The representation of the graphs is explained below.

Given that the sample sizes of the tests for Year 4 and Year 6 each approach 3000 students, statistical tests for significance will always show 'significant" differences between groups with relatively small differences in the observed means.

The issue is whether the difference is educationally different in terms of educational outcomes..
The comments relating to each of the box and whisker reports below, attempt to identify 'education outcomes' type of difference.

Figure 16 SISTA Literacy Scaled Score distributions by Year level and Gender 2013

At Year 4 the mean performance of the girls is marginally better than that of the sample of boys with the difference of 16 scaled score points representing an effect size of about 0.3 of a standard deviation.

By Year 6 this difference has reduced by a factor of a half, although the girls still tend to out-perform the boys.

Figure 17 SISTA Literacy Scaled Score distributions by Year level and Authority

There is a notable difference between the mean performance of the students of the government (provincial) school and the non-government (church authority) students at Year 4 with the difference of 29 scaled score points.

By Year 6 this difference has been reduced to just 17 points. This is still a significant difference but the size of the gaps is reduced.

Anecdotally it has been suggested that these differences in performances, and the relative improvement by Year 6may be in part due to the dominance of untrained teachers in government schools in the early years who are replaced by trained teachers in the upper primary schools.

Figure 18 SISTA Reading Scaled Score distributions by Gender 2013

Figure 18 shows a distribution of results very similar to that observed in the overall Literacy distributions displayed in Figure 16 at Year 4 level. However it is noticeable that the growth in the girls mean score at Year 6 is 73 scaled score points compared to the boys mean improvement of 54 points.

Experience in projects of this type indicates that improvement of about one standard deviation (50 scaled score points in this case) is about normal between Year 4 and Year 6. The boys' growth is in the range expected. The girls are doing a little better than expected.

Figure 19 SISTA 1 Reading Scaled Score distributions by Province 2013

Figures 19 and 20 below provide an overview of the sample results in Reading at Year 4 and Year 6 by province. It is notable that at Year 4 the mean performance of the students of the Honiara province is over 60 scaled score points above the average of the sample (401). On the whole the other provinces are relatively similar in overall performances.

At Year 6 the students of Honiara are still above the average of the sample but now by only 38 points. This may support the contention that there is a better quality of teaching taking place in the provinces in the upper primary school years.

Figure 20 SISTA 2 Reading Scaled Score distributions by Province 2013

## Key Finding 13

Although the overall performance of the students from the Honiara sample schools is significantly better than the means results of the other provinces at each Year level the growth observed between Year 4 and Year 6 is significantly less in Honiara province than in each of the other provinces.

Figure 21 SISTA Language Scaled Score distributions by Gender 2013

Figure 21 shows the performance of boys and girls in the Language sub strand of the English Literacy tests. When the mean results of this sub strand are compared against the Reading results it can be seen that the scores are very similar at Year 4 level but a little depressed at Year 6 level.

This may be an indicator that the language skills, involving in particular grammar and vocabulary, are not evolving as quickly as the Reading skills.

Figure 22 SISTA 1 Language Scaled Score distributions by Province 2013

Figures 22 and 23 display the Language strand results by province and Year level.
At Year 4 level the students in the Honiara province are almost 60 scale score points above the mean of the whole sample. By Year 6 the advantage in te mean performance of the Honiara students, although still considerably above the other provinces, has reduced to jus 40 scaled score points above the overall mean.

This is similar to the result observed in Reading.

Province

## Key Finding 14

As observed in the Reading strand the relative growth between Year 4 and Year 6 students in the Language strand is generally less in the Honiara province than each of the other provinces.

Figure 24 SISTA Writing Scaled Score distributions by Gender 2013

At both Year 4 and Year 6 the results in Writing are weak. Girls significantly out-perform boys but the mean result of the Year 6 girls is about the range that is normally expected of Year 4 students (viz Reading and Language).

As observed earlier Writing is an area that requires significant development in pedagogy and student learning and the weakness in Writing has a considerable impact in the assessment of Reading in its current format.

Figure 25 SISTA Writing Scaled Score distributions by Authority

## Y4 and Y6 Writing by Authority

NonGovt

NonGovt
Year 4

Figure 26 SISTA 1 Writing Scaled Score distributions by Province 2013

The lack of 'whisker' in the bottom distributions of several provinces at Year 4 level reflects the fact that there are up to $20 \%$ of students in the province who scored zero for the Writing assessment.

Figure 27 SISTA 2 Writing Scaled Score distributions by Province 2013

Key Finding 15
There is significant improvement in Writing in each province between the mean performances of Year 4 and the Year 6 students.

Figure 30 SISTA 2 Mathematics Scaled Score distributions by Province 2013

Figure 31 SISTA 2 Mathematics Scaled Score distributions by Authority

Mathematics Y4 and Y6 by Authority

Whereas there is a notable difference in the performance of students in schools administered by the province (Government schools) and those by church authorities (Non Government) in the Literacy tests Figure 31 shows that this is not the case in Mathematics.

In Mathematics the differences in performance are not educationally significant at either Year 4 or Year 6 level.

## Key Finding 16

The improvement in the mean Mathematics performance of students between Year 4 and Year 6 is consistent across all provinces

## STRENGTHS and WEAKNESSES

The sections below provide examples of the types of items that significant proportions of the sample were able to succeed with (Strengths) and those that were found to be too difficult for the majority of students (Weaknesses)

As a general rule of thumb items which had a facility (Percentage correct) rate of $80 \%$ or greater were included as indicators of strength, and those in which less than $30 \%$ of students were successful were defined as areas of weakness. The commonalities of the types of skills observed in each category is demonstrated in the sample of selected items below.

## Year 4 SISTA 1 Literacy

Strengths

In the Language component of the SISTA 1 test two items were answered correctly by more than $80 \%$ of students. As much as this is a high response rate it still means that more than $10 \%$ of students do not have control of the simplest of personal pronouns or the spelling of a very common word - "water".

There were no items in the Reading sections of the paper in which more than $80 \%$ of students were able to correctly respond to the items.

Q20-88\% correct

## B. Language Study

Choose the best word for each sentence in Questions 15 to 22.
20. This is $\qquad$ book.

O I
O Me
O my
O mine

## Q25-82\% correct

## B. Language Study

Tick the word which is spelt correctly.
25. People need to drink a lot of $\qquad$ .

[^1]
## Weaknesses in Reading

The following three Reading items required students to find information in a passage of about 150 words, retrieve in the appropriate idea, and construct a response that could be expressed in the written form.

Although this is the dominant methodology and skill taught in classrooms it is observed that more than $2 / 3$ of the students are unable to retrieve the information and formulate the answer.

Q10-13\% correct

## A. Reading Comprehension

## Read the story Maria plans an adventure.

10. Why did Maria go back to see Seno?

Q12-33\% correct
A. Reading Comprehension

Read the story Maria plans an adventure.
12. What warning did Seno give Maria about the airport?

Q14i-31\% correct
A. Reading Comprehension

Read the story again then find the underlined words that have the same meaning as the following:
i) at once

Appendix 3 shows that it, on average, about $70 \%$ of Year 4 students can read a simple passage, comprehend its meaning and find the appropriate answer in a multiple choice format. The significant decline in the success rate is observed when students are asked to formulate and write an answer.

The two stage cognitive and creative skill combination is beyond most students at Year 4.

## Key Finding 17

Year 4 students are developing skills in English Reading but have significant challenges in constructing and writing responses compared to recognising a correct answer in a multiple choice item format.

## Weaknesses in English Language Year 4

Items were prepared to assess student's understanding of Language in a variety of forms. The items below provide examples of elements of grammar in which less than $1 / 3$ of Year 4 students have demonstrated control over the skills articulated in the syllabus.

## Q22-14\% correct

## B. Language Study

Choose the best word for each sentence in Questions 15 to 22.
22. I found a $\qquad$ hiding place than he did.

O good
O gooder
O best
O better
Q23-22\% correct

## B. Language Study

## Tick the correct sentence.

23. 

O Sam having a boat.
O Sam is had a boat.
O Sam has a boat.

- Sam have a boat.

Q24-32\% correct

## B. Language Study

Tick the correct sentence.
24.

O They going to the shops.
O They go to the shops.
O They goes to the shops.
O They are go to the shops.

In the cloze shown below students were asked to select appropriate six words that completed the passage and provided a cogent meaning to the passage as a whole.

The two words that students found most challenging was the use of "so" as an adjective and differentiating between "of" and "off" when describing exiting from the bus (item 28vi) which was the final item in the close exercise.

Q28iv - 31\% correct
B. Language Study
28. Choose the correct word from the box to fill in the blanks.

You can only use each word once.
(NOT all words are used)

| searched | but | so | to |
| :--- | :--- | :--- | :--- |
| off | as | on | of |
| drove | stopped | tried | an |

Maria was $\qquad$ upset that

Q28vi - 16\% correct
B. Language Study
28. Choose the correct word from the box to fill in the blanks.

You can only use each word once.
(NOT all words are used)

| searched | but | so | to |
| :--- | :--- | :--- | :--- |
| off | as | on | of |
| drove | stopped | tried | an |

and walked $\qquad$ the bus.

## Key Finding 18

There are weaknesses in English language acquisition at Year 4 level relative to the expected outcomes articulated in the curriculum

## Year 4 SISTA 1 Mathematics

## Strengths in Year 4 Mathematics

The same criterion was applied when determining the "strengths" of students in attaining curriculum outcomes in, or up to the standard 4 curriculum. Appendix 5 provides information regarding the response patterns of all students on each item.

## Q06a-92\% correct

## Addition

6. Add the following;
a) 632
$+257$
$\qquad$

Q09a-89\% correct

## Subtraction

9. Subtract the following;
a). 876
$-712$

These items display control over addition and subtraction without trading.
Q09c-82\% correct

## Subtraction

9. Subtract the following:
c). 6453
$\begin{array}{r}-\quad 341 \\ \hline\end{array}$

Q13-83\% correct

## Division

13. If $63 \div 7=9$, then $7 \times$ $\square$ $=63$.

Q21a - 81\% correct

## Shapes

21. Complete the table below.

## Weaknesses observed in Year 4 mathematics

There are a number of common areas in which less than $1 / 3$ of students can consistently indicate understanding of the concepts and skills articulated in the syllabus. The areas that are of concern include elements of the Measurement sub-strand, Fractions and Money.

Samples of items in which there are high proportions of incorrect responses are provided below.
Q12d-25\% correct

## Multiplication

12.d). 293
$\times 4$

Q17-4\% correct

## Fractions

17. Re-write the fractions below from lowest to highest;

$$
\frac{3}{4}, \frac{1}{3}, \frac{1}{2}, \frac{2}{3}
$$

Q18-31\% correct

## Fractions

18. Calculate:
$\frac{1}{5}$ of 45 .

Q19 - 16\% correct

## Fractions

19. What is the value of the fraction at the point $\mathbf{A}$ on the following number line:

Value at point $\mathbf{A}$ : $\qquad$ $\frac{3}{4}$

Q20b - 25\% correct

Shapes
20. Name the following 2-D and 3-D shapes;
b).

Q22b-15\% correct
22. Complete the table below.

| Shape |  |  |  |
| :--- | :--- | :--- | :--- |
|  |  | Number of <br> Edges |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

## Q30 - 12\% correct

## Measurement

30. Find the area of the following shapes.

Using the formula below:
$A=1 \times W$.

$\qquad$

## Q31 - 14\% correct

## Measurement

31. A piece of land is in the shape of a square.

The length of each side is 20 m . A fence is built all around the piece of land.

How long is the fence around the piece of land?

Q32a-23\% correct

## Measurement

32. Use the diagram to answer questions a) and b).

a). Add the weights of the following:

Chewing Gum and Orange. $\qquad$

## Q32b - 5\% correct

## Measurement

32. Use the diagram to answer questions a) and b).

b). Find the difference in the weights of the following: Taiyo and Chewing Gum.

Q36a-22\% correct

## Money

36. Subtract the following amounts;
a). $\$ 23.40$

- \$ 1.70

Q36b - 20\% correct

## Money

36. Subtract the following amounts;

$$
\text { b). } \begin{array}{r}
\$ 35.40 \\
-\$ 11.90 \\
\hline
\end{array}
$$

Q37-24\% correct

## Money

37. Robert had $\$ 20$. He bought $\$ 7.80$ worth of ice-lollies. What was his change?

O $\$ 2.80$

- $\$ 12.20$
- $\$ 13.20$
- $\$ 27.80$

Q38-20\% correct

## Money

38. Tom has $\$ 25$.

Sam has \$45.
What is the difference?

Of particular concern here is the evidence in the Money sub-strand that indicates that less than $1 / 4$ of the sample have control over functions that would be considered to be normal day to day operations in society.

## Key Finding 16

There are weaknesses in the stands of Fractions, Measurement and Money

## Year 6 SISTA 2 Literacy

Strengths in Reading Year 6
In order to discriminate between students ability to read, comprehend and retrieve information in texts, compared to their ability to read, comprehend, retrieve and create a written response to questions relating to texts, the Year 6 test had a number of items that were in a multiple choice format AND in common with the Year 4 tests.

At Year 6 level almost 90\% of students demonstrated that they have the ability to complete the read and retrieve task successfully as indicated in the items below. It is also noted that these proportions are significant improvements on the success rates achieved by Year 4 students on the same items.

## Q01-90\% correct in Year 6 compared to 74\% in Year 4

For questions 1 to 5 tick the correct answer.

1. What is the name of this story?

O The Baby Elephant

- I Like Nelson

O Standing Up
O Elephants are Strong

Q02-88\% correct in Year 6 compared to 73\% in Year 4

For questions 1 to 5 tick the correct answer.
2. What did the mother elephant use to help Nelson stand up?

- her trunk
- her tail

O her voice
O her legs

Q04-88\% correct in Year 6 compared to 76\% in Year 4

For questions 1 to 5 tick the correct answer.
4. What made Nelson feel stronger?

- finding a new friend

O taking his first steps
O drinking his mother's milk
O using his trunk

## Key Finding 17

Students of Year 6 display and increased capacity to read, comprehend and retrieve information in texts compared to Year 4 students.

## Weakness in the Reading strand Year 6

By comparison items which required that students read a narrative passage, extract information, meaning and/or inferences from the story and create a written response show a very different level of skill attainment compared to just reading and selecting a correct answer in a multiple choice format.

The items below, and in particular the annotations of the facility rates for each item demonstrate this weakness in the student's attainment of the curriculum expectations of Year 6 students.

Q07-23\% correct

Read the story in the box, and then answer the questions 6-14.
7. Why was Laka so surprised when he looked into the first mirror?

O he did not recognise himself
O he thought there was something wrong with the mirror
O he no longer looked like his father
O he looked very miserable

Q09-29\% correct

## Answer the questions 9 to 13 in complete sentences.

9. What made Laka miserable?

Q10-23\% correct

## Answer the questions 9 to 13 in complete sentences.

10. How did Laka and his servant find the mirror of truth?

## Q11-9\% correct

## Answer the questions 9 to 13 in complete sentences.

11. Why did Laka pick up the mirror with 'shaking hands'?

## Q12-17\% correct

Answer the questions 9 to 13 in complete sentences.
12. Why was Laka's reflection different in the mirror of truth?

## Answer the questions 9 to 13 in complete sentences.

13. What lesson did Laka learn in this story?

Q14i-19\% correct

Read the passage again and write the meanings of the following underlined words from the passage.

```
14. i) miserable
```

Q14ii - 9\% correct

## Read the passage again and write the meanings of the following underlined words from the passage.

14. ii) determined

Q14iii - 11\% correct
Read the passage again and write the meanings of the following underlined words from the passage.
14. iii) sympathised

Q14iv-29\% correct
Read the passage again and write the meanings of the following
underlined words from the passage.
14. iv) glittering

Q14v-29\% correct
Read the passage again and write the meanings of the following
underlined words from the passage.
14. v) responsibilities

The facility rates expressed in the Reading items above reflect the observations made in the Year 4 assessments.

Although the common classroom practice is this form of constructed response there is a significant difference between students ability to read, retrieve and comprehend information in texts compared to their general ability to formulate a response (as opposed to identifying a correct response in a multiple choice format) and write that response in a cogent set of words.

This is particularly obvious in the "write the meaning" type items in which some of the words have quite challenging synonyms and constructing a suitable piece of text is a quite difficult task.

## Key Finding 18

At Year 6 items that require students to read and comprehend the information in texts and then to formulate and answer and write a constructed response are generally poorly completed.

## Weakness in the Language strand

Q19-21\% correct

## Select the correct word from the brackets. Write your answer in the blank space provided.

19. Linda sang a $\qquad$ song than the last one. (good, better, best)

Q26-26\% correct in Year 6 compared to 14\% at Year 4
Choose the best word for each sentence in Questions 23 to 28.
26. I found a $\qquad$ hiding place than he did.

- good
- gooder

O best
O better

Q27-31\% correct in Year 6 compared to 22\% in Year 4

Tick the correct sentence.
27.

O Sam having a boat.
O Sam is had a boat.
O Sam has a boat.

- Sam have a boat.

Q28-29\% correct compared to 32\% in Year 4

Tick the correct sentence.
28.

O They going to the shops.
O They go to the shops.
O They goes to the shops.
O They are go to the shops.

## Q29vi - 31\% correct

29. Choose the correct word from the box to fill in the blanks.

You can only use each word once. (NOT all words are used)

| searched | but | so | to |
| :--- | :---: | :---: | :---: |
| off | as | on | of |
| drove | stopped | tried | an |

Maria was
upset that she went
the front, and walked
___ the bus.

As observed in Year 4, students of Year 6 are still experiencing difficulty in words like "so" used as an adverb and in discriminating between "of" and "off" to alight from a bus.

## Key Finding 19

The types of weaknesses observed in Year 4 Language are present in Year 6

## Year 6 SISTA 2 Mathematics

Strengths in Year 6 Mathematics
Q01a - 94\% compared with $69 \%$ in Year 4

## NUMBERS

1. Add the following:
a). 7352
$+3465$
$\qquad$

Q04a-81\% compared with $56 \%$ at Year 4

## NUMBERS

4. Divide the following;
a).

Q08a - 93\% compared with 68\% in Year 4

## Money

8. Calculate the following;

$$
\text { a). } \begin{array}{r}
\$ 2.60 \\
+\quad \$ 1.30
\end{array}
$$

Q01b - 81\%

## NUMBERS

1. Add the following:
b). 697318
$+16193$

Q05a-80\% correct

## NUMBERS

5. Calculate the following
a). $6714+3273-7871=$

Q08b - 84\% compared to 42\% in Year 4

## Money

8. Calculate the following;
b). $\$ 75.90$
+\$3.50

## Key Finding 20

The item statistics above indicate that by Year 6 most students tend to have control over the basic functions of addition and subtraction and its application to money when expressed in the traditional text book algorism format.

In each of the common items that relate to basic operations there is evidence of significant improvement by Year 6 compared to Year 4 in the mean performances.

## Q11a-92\%

## Graphs

11. The pie chart shows the favourite sport chosen by 30 standard six students in a school.

(a). How many students chose rugby? $\qquad$

Q11b-80\%

## Graphs

11. The pie chart shows the favourite sport chosen by 30 standard six students in a school.

[b]. Which was the mout popular aport?

## Q12a - 87\% compared with 80\% in Year 4

12. The tally chart shows the favourite subject of 19 students in a class.
a)
Complete the tally table

| Subject | Tally | Number |
| :--- | :---: | :--- |
| Maths | $H+$ | 5 |
| Scionce | 1111 | - |
| English | $+1+11$ | - |
| Soc Science | 111 | - |

## Q12b - 81\% compared with 68\% in Year 4

12. Complete the number column in the tally table above and draw a vertical bar graph of the information.
b)

Q13a-90\% correct
13. The graph shows the rainfall in Honiara for a week.

(a). Which day had the most rain?

On average, at Year 6 level students appear to have a reasonable grasp of the types of graphs that are commonly represented in the press and other media. Items 11a and 11b (above) indicate that most students are able to extract the information in graphs and read the key to give meaning to the values.

## Weaknesses in Year 6 Mathematics

At Year 6 the weaknesses in Mathematics are grouped around three basic topics:
Long Division - involving numbers or fractions (including money);
Fractions; and
Word problems - covering a number of different sub-strands

## Q04c-29\% correct

## NUMBERS

4. Divide the following:
c).

## Q10b-26\% correct

## Money

10. Divide the following;
(b).

FRACTIONS

## Q17c - 25\% correct

17. Calculate the following;
c). $\frac{3}{4}+\frac{1}{5}=$ $\qquad$ _.

Q21-8\% correct

## Decimals

21. In the number $\mathbf{1} \cdot \mathbf{5 6 3}$, write the value of the digit in the:
tenth place. $\qquad$

Q24a-84\% correct

## Decimals

24. Subtract the following;
a). $1.5-0.4=$ $\qquad$

Q26a-24\% \% correct

## Decimals

26. Divide the following;
a). $8.6 \div 4=$ $\qquad$

Q26b-30\% \% correct

## Decimals

26. Divide the following;
b). $6.3 \div 7=$

## WORD PROBLEMS

## Percentages

31. Calculate;
b). 30 as a percentage of 250 .

Q32-27\% \% correct

## WORD PROBLEMS

32. A bag had a total of 230 mangoes. If $20 \%$ of the mangoes were bad, how many mangoes were bad?

Q33-10\% \% correct

## WORD PROBLEMS

33. In a survey of 250 people, 150 said they watched TBN each week. What percentage of those surveyed watched TBN each week?

Q35-7\% \% correct

## Ratios

35. A school has 15 teachers and 300 students. Write the number of students per teacher in the simplest ratio.

Q36c-28\% \% correct

## Ratios

36. Change these measurements as shown;
c). 234 ml (to ?) $\qquad$

Key Finding 21
The weaknesses in Fractions observed in Year 4 are still challenges in Year 6 Mathematics. Word problems are challenging for Year 6 students.

## RECOMMENDATIONS

## RECOMMENDATIONS

## Curriculum

## Literacy - Writing

The results in the Writing assessments of Year 4 and Year 6 indicate a significant weakness in the skills associated with creative Writing.

In the Year 6 Reading comprehension assessment the responses of students to the open-ended, constructed response items that require students to write a response are relatively poorly attempted with the sample average correct score in these items in the range from $10 \%$ to $30 \%$.

It is difficult to know how much the poor writing skills have contributed to the poor Reading results in this section of the assessment. The aggregation of Reading and writing skills into one item type adds a level of confusion to the result.

## Recommendation 1

- That the development of writing skills be noted as a weakness at the national level and that strategies be developed by all contributors to students and teacher learning to improve student outcomes in the written form of English.

## Mathematics

It is apparent that in Year 4 Fractions, Measurement and Money are sub-strands with significant weaknesses.

It is also not unreasonable to suggest that Fractions is a sub-strand that many non-Mathematics trained teachers find challenging, and in the Solomon's society there are cultural issues that mean that the concept of fractions can be confused. (in Mathematical terms a half is precisely two equal shares but in Solomon's culture it is two shares and there can be a 'bigger half').

Several of the measurement items that have been the most challenging for Year 4 are grounded in fractions, requiring students to have an understanding of units of measure (grams and kilograms)

Money is a sub-strand that has a direct impact on a student's effectiveness in society and as such should have a relatively high importance in the curriculum. Money is an application of decimal fractions that is functionally understood by most teachers.

There is an increasing trend in educational curriculum development to narrow the curriculum scope but require a greater depth of the content that is included. That is value understanding and application of a narrow range of concepts rather than surface understanding of a wider range.

## Recommendation 2

- That in Year 4 ONLY the concept of Fractions and its application to Money be included in the curriculum AND that more time be devoted in the scope and sequence programs to the mastery of the sub-strands components of Money.

## Teaching and Learning

## Recommendation 3

- That the pedagogy of teaching of writing as a subject be prioritised in teacher training AND that the use of criterion referenced assessment of writing be supported in teaching programs

## Professional Development Recommendation 4

The data reveal that there is a weakness in the attainment of Reading skills beyond skills that require retrieval of literal information or word matching in the texts. Providing exemplars of tasks and good assessment is critical to addressing this weakness. Teachers need resources to support the teaching and classroom assessment of reading in forms other than the current constructed response paradigm that confuses Reading comprehension skills with analytical thinking and creative writing skills.

It is suggested that the student/lecturer resources of SINA and USP be used for students to source suitable texts and prepared materials for use in classroom as a s a component of their pedagogical leaning/assessment. These materials can be reviewed and modified using the technical expertise of NESU and CDU to general a library of templates for teachers to use in classrooms as Reading resources and good examples of classroom assessment practice to improve student learning outcomes.

- That the resources of USP, SINU, MEHRD Curriculum Development Unit and NESU be used to prepare Reading resources with associated assessment items to provide resources to assist teachers in the teaching and assessment of student Reading skills.

## Recommendation 5

There is a considerable resource available in the form of student work. In Writing there are examples of the full range of student responses from those of low ability to some excellent, highly scored work. The use of actual samples of student work, annotated to explain the rationale underpinning the marks awarded using the implemented rubric, is an excellent teaching resource that allows teachers to get a sense of the Standards that are expected, and the manner in which the technical aspects and writing skills of students can be improved in a variety of ways.

- That samples of student works from the 2013 SISTA assessment be annotated and provided to schools as samples of various standards of student writing and the use of the SISTA writing rubric as a tool to assist teaching and learning.

## Recommendation 6

The analysis has included two levels of school report.

1. An item level report that describes skills assessed by each item and the relative performances of the school, the province and the national sample on each items; and
2. A class report that enables a quick reference to the manner in which each member of the target class has responded to each item.

These two report provide diagnostic data for review by principals and teachers to understand the strengths and weaknesses of students in various aspects of the curriculum at school level. These reports provide information for data-driven interventions at school level.

To make efficient use of the information in these reports principals and teachers need instruction in their interpretation and how they can use them to develop school based policy.

- That workshops be scheduled with key school level personnel, principals and curriculum leaders, in the manner in which the school level data from the SISTA analysis can be used to inform the development of school development programs and individual class level interventions.

## Analysis and Psychometrics

## Literacy

Although the SISTA English assessments of 2013 functioned adequately there are some aspects that could be improved in the test forms for future implementations.

The Year 6 instrument requires some items to fill the gaps identified in Figure 2. Ideally these should be multiple choice items, possibly linked to Year 4, that enable an evaluation of how well Year 6 students extract information from texts without being required to construct a written answer.

## Recommendation 7

- That the Year 6 SISTA English paper include another reading passage targeting the weaker ability students AND that the majority of the items assessing the comprehension of these students in this passage are of multiple choice format.

The English SISTA scale has been calibrated using the data from the 2013 sample assessment.

## Recommendation 8

- That, in the event that the SISTA X forms are used for future national sample assessments, the items locations detailed in Appendices 3 and 4 are anchored to assess student abilities in the assessment.

In the event that that NESU and the Ministry resolve to continue with the SISTA program, and that they decide to utilise the SISTA $Y$ suite of assessments then these forms will require significant revision to match the constructs developed for the SISTS $X$ suite of assessments.

## Recommendation 9

- That, in the event that the SISTA Y forms are used for future national sample assessments, the test forms be revised to match the construct of the SISTA X forms, AND common items between the SISTA $X$ and SISTA $Y$ forms are included so that the Form $Y$ results can be calibrated on the 2013 SISTA scale.

## Mathematics

The Year 6 results in Figure 4 display a gap in the lower range of the item difficulty distribution and possibly too many items in the more difficult range.

## Recommendation 10

- That a review of the Year 6 Mathematics SISTA $2 X$ paper be conducted with a view to increase the number of slightly easier items and reduce the number of more difficult items in an attempt to better target the tests to the students and therefore maximise the information regarding their overall ability.

## IMPLICATIONS FOR POLICY AND FUTURE STUDIES

The development of a Standards Referenced Scale for the SISTA assessments that spans both Year 4 and Year 6 is an initiative that allows more reliable estimates of relative performance and estimates of growth over time to be measured. This scale is grounded in the results of the "implemented" curriculum - what has been observed in student responses to skills learned in classrooms.

The proportions of students achieving each level have been developed using a rationale that is embedded in the scale and the items that contribute to the development of the scale.

In terms of the descriptions of achievement and acceptable standards of achievement (Level 3 in Year 4 and Level 4 in Year 6) it would be a valuable exercise for an expert group to convene and review how well the implemented curriculum, as assessed and reported in the SISTA assessments, and the descriptions of acceptable achievement align with the "Intended Curriculum" defined by the ministry documentation.

Provided there is reasonable alignment in these standards with the curriculum expectations then the results should be endorsed as base line statistics for future studies and comparisons.

To evaluate the impact of the types of interventions that may be precipitated by the 2013 SISTA and other programs it is suggested that SISTA should be implemented in 2016 or the latest 2017 as a follow up study to validate these results and measure change in the intervening period.

## APPENDICES

APPENDIX 1 - Achieved Sample - Year 4

| Province | School name | Enrolment | School Location | Sample <br> (N) | Achieved (N) | Participation |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^0]:    Key Finding 8
    The Writing results of Year 4 are very poor and although there is significant improvement between Year 4 and Year 6 the results of Year 6 are still well below the expected level.

    On average the Year 6 sample was functioning in Writing at a level that could be reasonably expected of Year 4 students.

[^1]:    O watter

    - Wartar

    O Worter

    - Water
